

## Job Vacancy | C++ developer

### About YOU!

- Would you like to join a fast growing global start-up?
- Are you looking for a new opportunity to challenge yourself?
- Do you see yourself working in a young and professional team?
- Do you feel excited in finding new ways to change the way people currently communicate?

### About us

We are a start-up active in the corporate industry located very close to Amsterdam Central Station. Our aim is to make the 30 million presentations, that are created each day, more interactive and with it let audiences participate instead of only listen. Our projects are mostly for the European and US market and aiming for the other continents.

We like to generate data from an audience and let speakers start a dialogue instead of a monologue via their own devices. To achieve this, we are the only company worldwide who has built a PowerPoint add-in, which is fully embedded into the PowerPoint application of the speaker. This allows for seamless use of the add-in during the speaker's presentation.

The audience can participate with their device via a website, SMS and Twitter. This way, the audience is engaged and able to speak up and be heard.

### About the position

The PowerPoint add-in is developed in C/C++. Big corporates are adding our software onto all their computers. A new way of presenting is introduced and PowerPoint presentations are brought to a whole new level. Employees are now able to speak up during meetings, boring presentations have now changed to interesting dialogues. With this we are changing cultures within companies. Your primary goal is to analyze, design and implement your and our new ideas into the add-in. Continuous development allows us to provide the market with 'the latest' in interactivity

### About you in details

You are a creative thinker, ready for a second/third challenge in your programming career. You are able to translate a client's questions into smart solutions. You are highly motivated and very critical on everything you develop. You like to continue working on an existing product and like to communicate with all team members (also non IT) to improve our product. Do you recognize yourself in being open minded, analytical, flexible, positive and do you like a challenge?

### Requirements

- Education HBO or Academic: informatics or IT-related
- Proper knowledge of C++ and PHP
- Experience maintaining MariaDB / MySQL databases
- Fluent in written and spoken English
- Hands-on and result driven team player
- Aware of developments in your discipline and eager to spot new trends

### Nice to have

- Experience with the Office API, the Windows API, MFC and COM objects.
- Experience with Linux and Windows system administration
- Experience with Java, MySQL and web-development [HTML/CSS/Javascript]
- Experience with CentOS/Red Hat, Apache, NodeJS, GIT and React

### Our Offer

- Competitive salary and bonus possibilities
- Work at a fun and energetic start-up in a growing international market
- A flexible and enthusiastic work environment
- Great team with lots of energy and ambition
